

Plate cleaning

Cleaning products

Solvent Ink: Properly balanced mixture of solvents up to 80/20 (alcohol/acetate) and specialized cleaning chemicals (compatible products)

Water-based Ink: Mix of water and detergent

UV ink: Pure Alcohol

If there are doubts about compatibility, perform a compatibility test and always make sure that the mixture is balanced.

It is also advisable to use specialized chemicals to clean the plates. Some companies are experts in developing these products.

Important note

Clean plates immediately after use. Dried ink is very difficult to clean.

When hand washing, use a soft sponge/brush and a lint-free cloth to dry. Cleaner suitable for ink and compatible plate. Let the cleaner soak in and dissolve the Dry ink. Avoid common rags and nylon cloths.

Always clean with alcohol before reuse to remove residual cleaner. In order not to put the entire plate in chemical cleaning, use a spray to apply the solvent (cleaner) only in the area with paint before cleaning, at the end of cleaning use compressed air to dry the plate (carefully not to apply a flux of excessive air and make sure that the air is not contaminated)
